Summary

Software Engineer with 7+ years of experience across Banking, Fintech, Marketing Platforms, Vehicle Financing, and Game Developer Tooling. I've built reusable UI libraries that multiple product teams depend on, and worked on complex frontend problems — payment flows, user onboarding, live-preview document editors, and real-time event feeds. With a proven skillset in Frontend, I also have real depth in backend and mobile to own features end to end when needed.

Skills

Frontend: React.js, Next.js, TypeScript, JavaScript, CSS, TanStack, State Management, Tailwind CSS, Zod, Zustand, Shadcn/UI, Radix UI, Ant Design, MUI, Web Performance, SEO

Mobile: React Native, Flutter

Backend: Go, Node.js (Express), Laravel

Database: PostgreSQL, MySQL, MongoDB

Tooling & Infra: Docker, RabbitMQ, Redis, GitHub Actions, Grafana, gRPC, WebSocket

Testing: Jest, Cypress

Experience

Senior Software Engineer - Full Stack | January 2025 - July 2026

Quickbill (PT Integrasi Keuangan Digital) | *Jakarta, Indonesia*

Quickbill is a fintech company providing digital invoicing, payment processing, and enterprise billing solutions, enabling businesses to manage invoicing, payment collection, and financial transactions through a unified platform.

- Built Quickbill from the ground up (frontend and backend). Starting from a 5-person engineering team that grew to 20+ engineers, taking the platform from zero to 3,000+ active users and trillions of rupiah in transactions processed every month.
- Led frontend architecture decisions, set up CI workflow, design patterns, and rendering strategies, and served as the go-to engineer for frontend across a team of 6 frontend engineers.
- Architected and maintained all Quickbill platforms: B2C platform, payment services, B2B enterprise platform, open API, backoffice, and the Quickbill Mobile app built with Flutter.
- Built the payment feature UI — managing complex payment state and integrating with Doku and Xendit SDKs to support multiple payment methods and steps on the platform.
- Built an embeddable payment app for enterprise clients, with integration documentation and direct technical support to help them plug Quickbill payments into their own platforms.
- Mentored frontend engineers through code reviews, pairing sessions, and direct feedback — helped the team ship more consistently and make better architecture calls.
- Built an internal UI component library with Shadcn and Base UI as the main UI for all Quickbill's Platforms

Skills: Next.js, TypeScript, TanStack, PostgreSQL, Go, Flutter, Docker, Redis, RabbitMQ, Frontend Architecture, Team Leadership

Software Engineer - Full Stack | April 2024 - December 2024

1Engage (PT Eka Nusantara Gemilang, Sinarmas Group) | *Jakarta, Indonesia*

PT Eka Nusantara Gemilang (1Engage) is a technology company under Sinarmas Group and an official Meta Business Solution Provider, delivering enterprise customer engagement, omnichannel communication, and WhatsApp Business solutions.

- Built the core marketing engagement platform with deep integration into WhatsApp Cloud API — covering chatbot flows and multi-account WhatsApp Business management.
- Built a WhatsApp message template editor with a rich-text editor — inline formatting, dynamic variables, and live preview — built on Lexical.js.
- Introduced and standardized proper TanStack Query usage across the team — identified misuse patterns, refactored the existing implementation, and ran a knowledge-sharing session so the whole team was aligned on the right approach.
- Diagnosed and resolved a performance issue causing every form field to re-render on each keystroke, significantly improving typing responsiveness across large multi-field forms.

Skills: Next.js, TypeScript, Express.js, MongoDB, PostgreSQL, RabbitMQ

Software Engineer II - Frontend | January 2023 - April 2024

Accelbyte | *Washington, USA (Remote)*

AccelByte is a global game technology company providing backend infrastructure, live services, and developer tools for online multiplayer games.

- Shipped key features for the Accelbyte Development Toolkit: game installation with local disk integration, build and version management, and playtesting channels — including shareable builds, streamed downloads, configurable launch arguments, and scheduled online sessions.
- Built an event history feature for the ADT web platform — displaying game session logs, crash reports, and stack traces, with reporting charts to surface trends over time.
- Later moved to the Accelbyte Multiplayer Service (AMS) squad, where I built a logging feature for the AMS web platform: a gRPC-based pipeline for backend-to-backend log streaming, and a WebSocket layer to deliver real-time logs to the frontend.
- Worked closely with product managers, QA, and backend engineers across time zones in an agile scrum environment — participating in sprint planning, standups, and reviews to keep features on track.

Skills: Electron, TypeScript, React.js, gRPC, WebSocket

Software Engineer II - Frontend | February 2022 - January 2023

Moladin (PT Moladin Digital Indonesia) | *Jakarta, Indonesia*

Moladin is an Indonesian automotive technology company providing digital financing, vehicle marketplace, and financial services solutions.

- Developed and maintained features for Moladin's refinancing service on the consumer-facing (B2C) web platform.
- Worked within a cross-functional squad to deliver end-to-end feature releases covering new functionality, performance fixes, and ongoing maintenance.
- Managed application state with Redux across a complex multi-step refinancing flow, ensuring predictable state transitions between form steps and API interactions.

- Participated in sprint ceremonies — planning, daily standups, and retrospectives — working directly with product and QA to align on priorities and validate features before release.

Skills: React.js, Redux, Tailwind CSS, Single SPA (micro-frontend)

Frontend Developer | March 2021 - February 2022

Maybank (PT Bank Internasional Indonesia) | *Jakarta, Indonesia*

Maybank Indonesia is one of Indonesia's leading financial institutions, providing banking and digital financial services.

- Involved in a modernization project to migrate the legacy Branch Delivery System (BDS) to a micro frontend architecture built on React.
- Set up the micro frontend architecture, established development tooling using Python, and researched libraries for performance and developer experience improvements.
- Built a reusable form and validation system from scratch — the app was form-heavy, so having a shared foundation meant every form in the product behaved consistently without duplicating logic.

Skills: React.js, Single SPA (micro-frontend), TypeScript

Web Developer | March 2019 - March 2021

vOffice Indonesia | *Jakarta, Indonesia*

vOffice Indonesia is a business services company providing virtual office, legal, licensing, and digital business solutions.

- Developed and maintained mostly static marketing websites for all brands under the vOffice group: voffice.co.id, izin.co.id, huqum.id, hellolive.id, helloka.id.
- Built a custom CMS in Laravel allowing the marketing team to manage dynamic content such as promos, services, and landing pages independently, plus AMP pages for select properties.
- Ensured web best practices across accessibility, SEO, and performance for all properties.

  Stack: Laravel, PHP, jQuery, Bootstrap, HTML, CSS, JavaScript

Part-time Experience

Mentor (Part-time) | April 2024 - June 2024

RevoU | Jakarta, Indonesia

- Mentored students on web development fundamentals and provided hands-on project consultation throughout their program.

Education

Universitas Persada Indonesia Y.A.I

Bachelor of Information System, 2018-2023 | *GPA 3.34*

Telekomunikasi Telesandi Bekasi Vocational High School

Software Engineering, 2015-2018

Certifications & Competitions

- **1st Place Winner, Student Competency Competition in Web Design and Development** – Regional Bekasi City, 2017, organized by the Ministry of Education and Culture, Republic of Indonesia.
- **3rd Place Winner, Student Competency Competition in Web Design and Development** – Regional West Java Province, 2017, organized by the Ministry of Education and Culture, Republic of Indonesia.
- **HackerRank Certificate Of Accomplishment**
  Javascript (Intermediate)
  React
  CSS
  Python
- **Udemy Certificate Of Completion**
  React Js Complete Guide 2025 by Academind,
  Complete iOS & Swift App Development by Dr. Angela Yu,
  Python Programming Bootcamp by Derek Banas
